**How to Install Kali Linux in VirtualBox**

1. Download and install Virtual Box
2. Download Kali Linux 64bit for Virtual Box at www.kali.org/get-kali/#kali-virtual-machines

3. If you don't already have it, download 7zip to extract the .7z file you downloaded in step 2.
4. Extract the contents of the .7z zip file using 7zip
5. In Virtual Box, File > Import Appliance > select your Kali Linux .vbox file
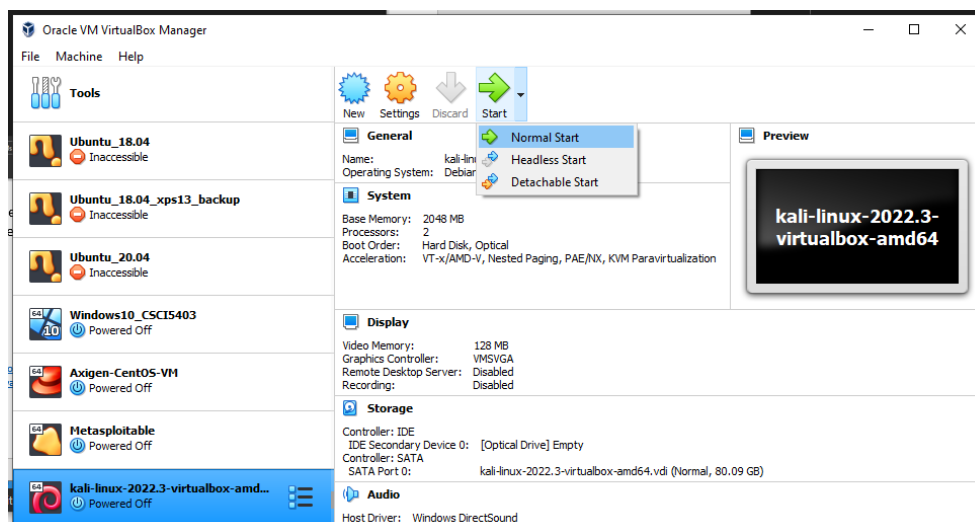

6. Select your .vbox file

7. Click Open, your machine should be created.
8. With the Kali virtual box selected, click the small dropdown next to start to select Normal Start.

9. The default login credentials will be
    user: kali
    password: kali
